Industrial Engineering Solutions for Smart, Ergonomic and Sustainable Mining Machinery Workplaces: Short Overview of SmartMiner Project

Vesna Spasojević Brkić

University of Belgrade, Faculty of Mechanical Engineering, Industrial Engineering Department

Kraljice Marije 16, 11120 Belgrade, Serbia

#GRANT No. 5151

Support Systems for Smart, Ergonomic and Sustainable Mining Machinery Workplaces

SmartMiner

Participating Scientific and Research Organizations (SROs) :

1. Faculty of Mechanical Engineering; University of Belgrade (FMEUB)
2. Technical Faculty in Bor; University of Belgrade (TF Bor)
3. Innovation Center, Faculty of Mechanical Engineering; University of Belgrade (ICMF)

Principal Investigator (PI): dr Vesna Spasojević Brkić, full professor, FMEUB

Science Fund
of the Republic of Serbia

This project was supported by the Science Fund of the Republic of Serbia # GRANT No. 5151, Support Systems for Smart, Ergonomic and Sustainable Mining Machinery Workplaces - SmartMiner

SmartMiner focus

- SmartMiner focus - the current problems of the mining industry
- SmartMiner offers smart solutions how increase **productivity, safety and sustainability** through a **paradigm shift towards combining a human-centric approach with business strategy in a way that is based on data and analytics.**
- SmartMiner will allow **mining companies to become reliable partners for increasing the prosperity index in society.**

SmartMiner aims...

... to give a scientifically based answers to the following questions:

- Are the stoppages of mining machines primarily caused by technical-technological causes and is there a hidden potential in human and/or organizational factors to solve pollution and safety problems?
- How to improve productivity of mining machines through greater satisfaction and high motivation of users (operators) and improved work organization?
- How to improve safety in the operation of mining machines and prevent environmental degradation, population displacement and constant conflicts in the environment?
- How to further reduce the operating costs of mining machines?
- How to solve the challenges related to the extended life of exploitation of mining machinery and increase energy efficiency?
- How to make the mining industry a reliable partner for the development of wealth and prosperity in society?

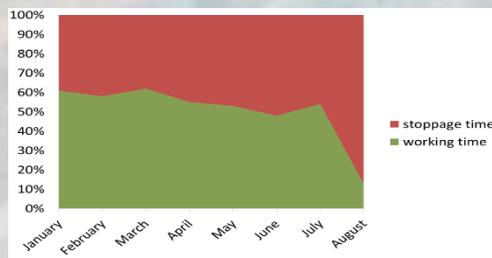

Figure 1. Working and stoppage time of BWE

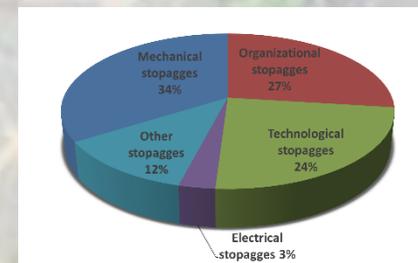

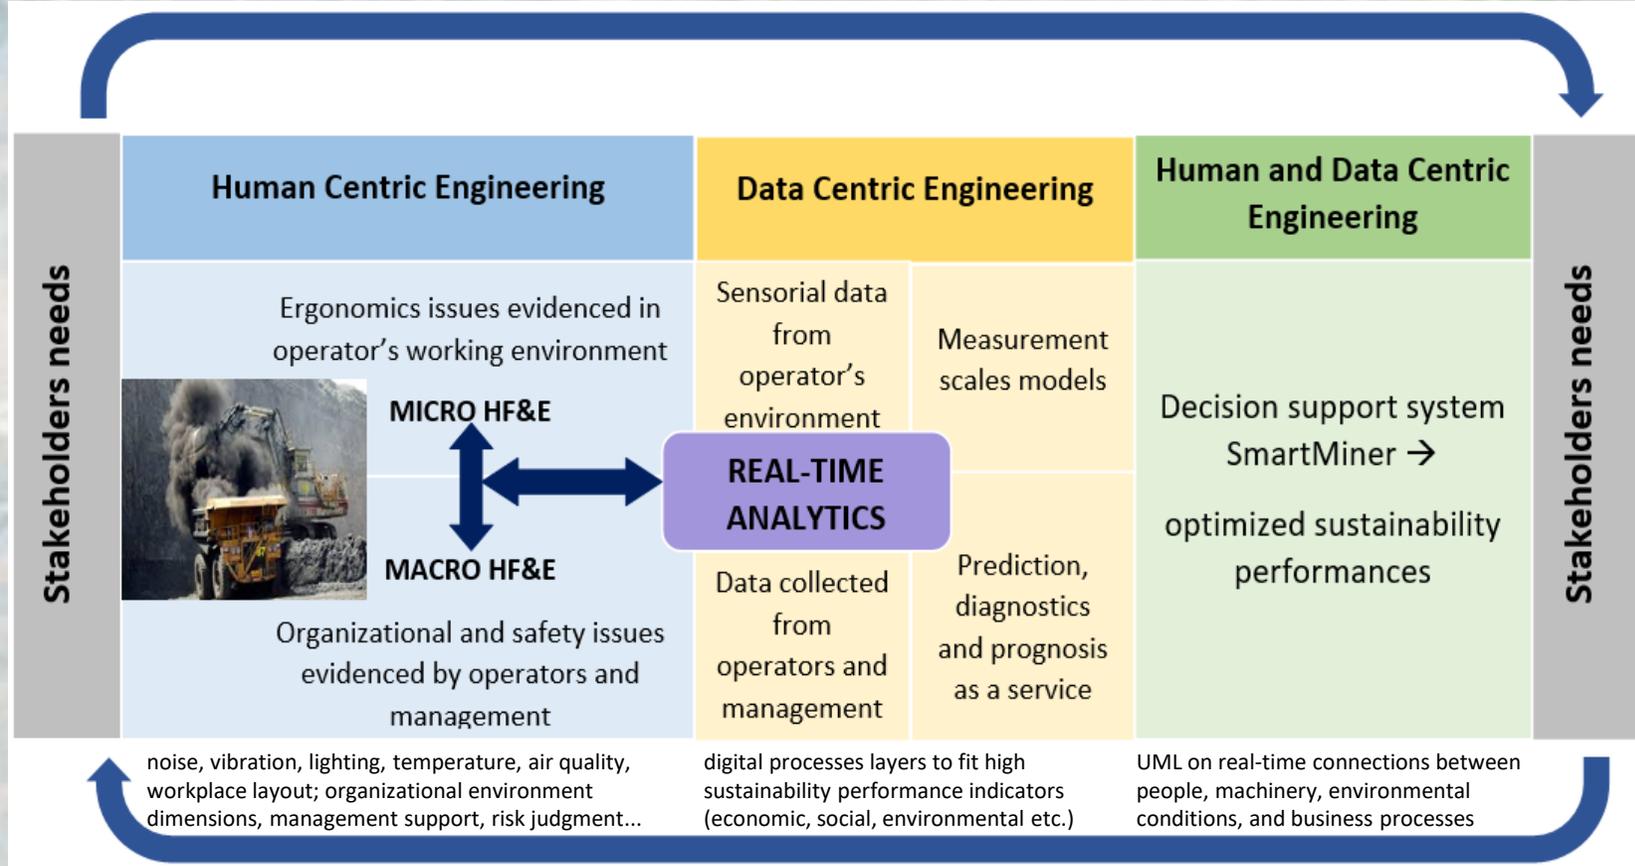

Figure 2. Types of stoppages of BWE

SmartMiner concept in a nutshell

“Human will be always in center, and we should keep it so.”

SmartMiner hypothesis

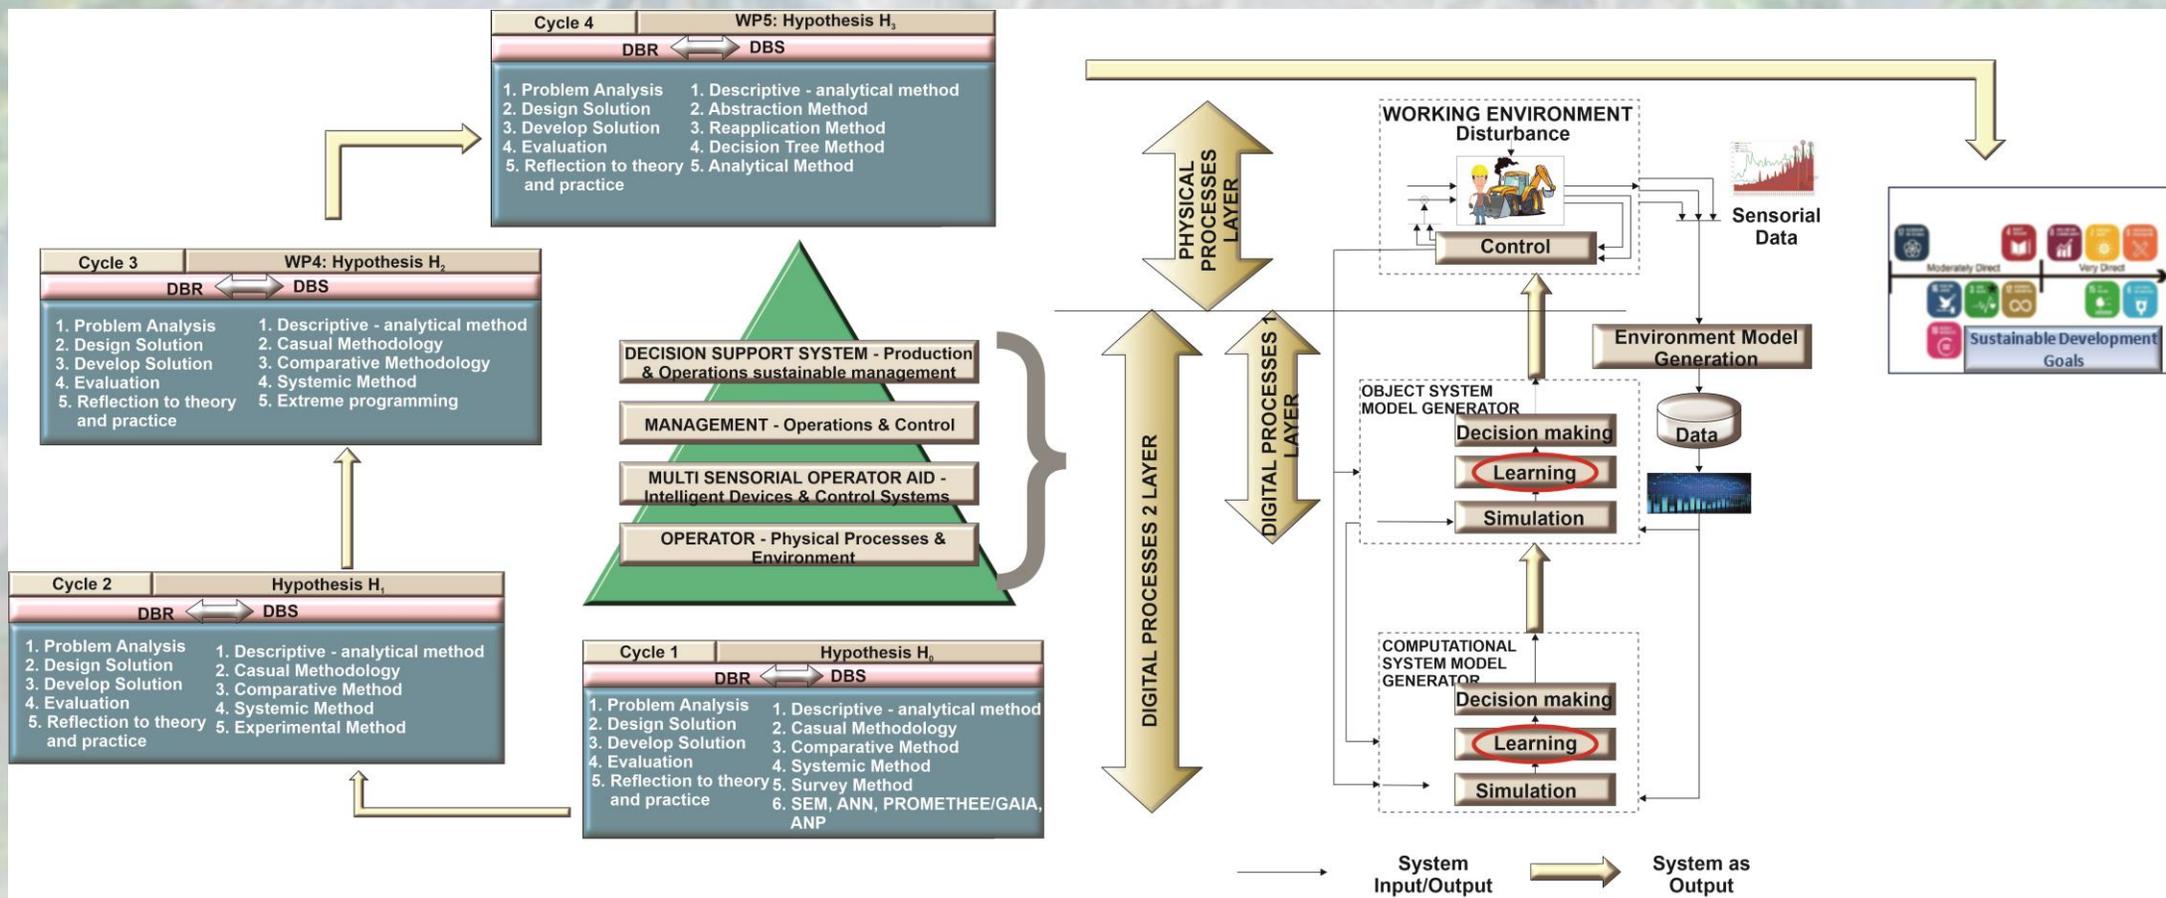

H₀: Necessary step between operator 4.0&5.0 and society 5.0 is “management 4.0”, which means human (and his environment) in the center and raising environmental quality through micro (physical environment) and macro environment levels (organizational environment).

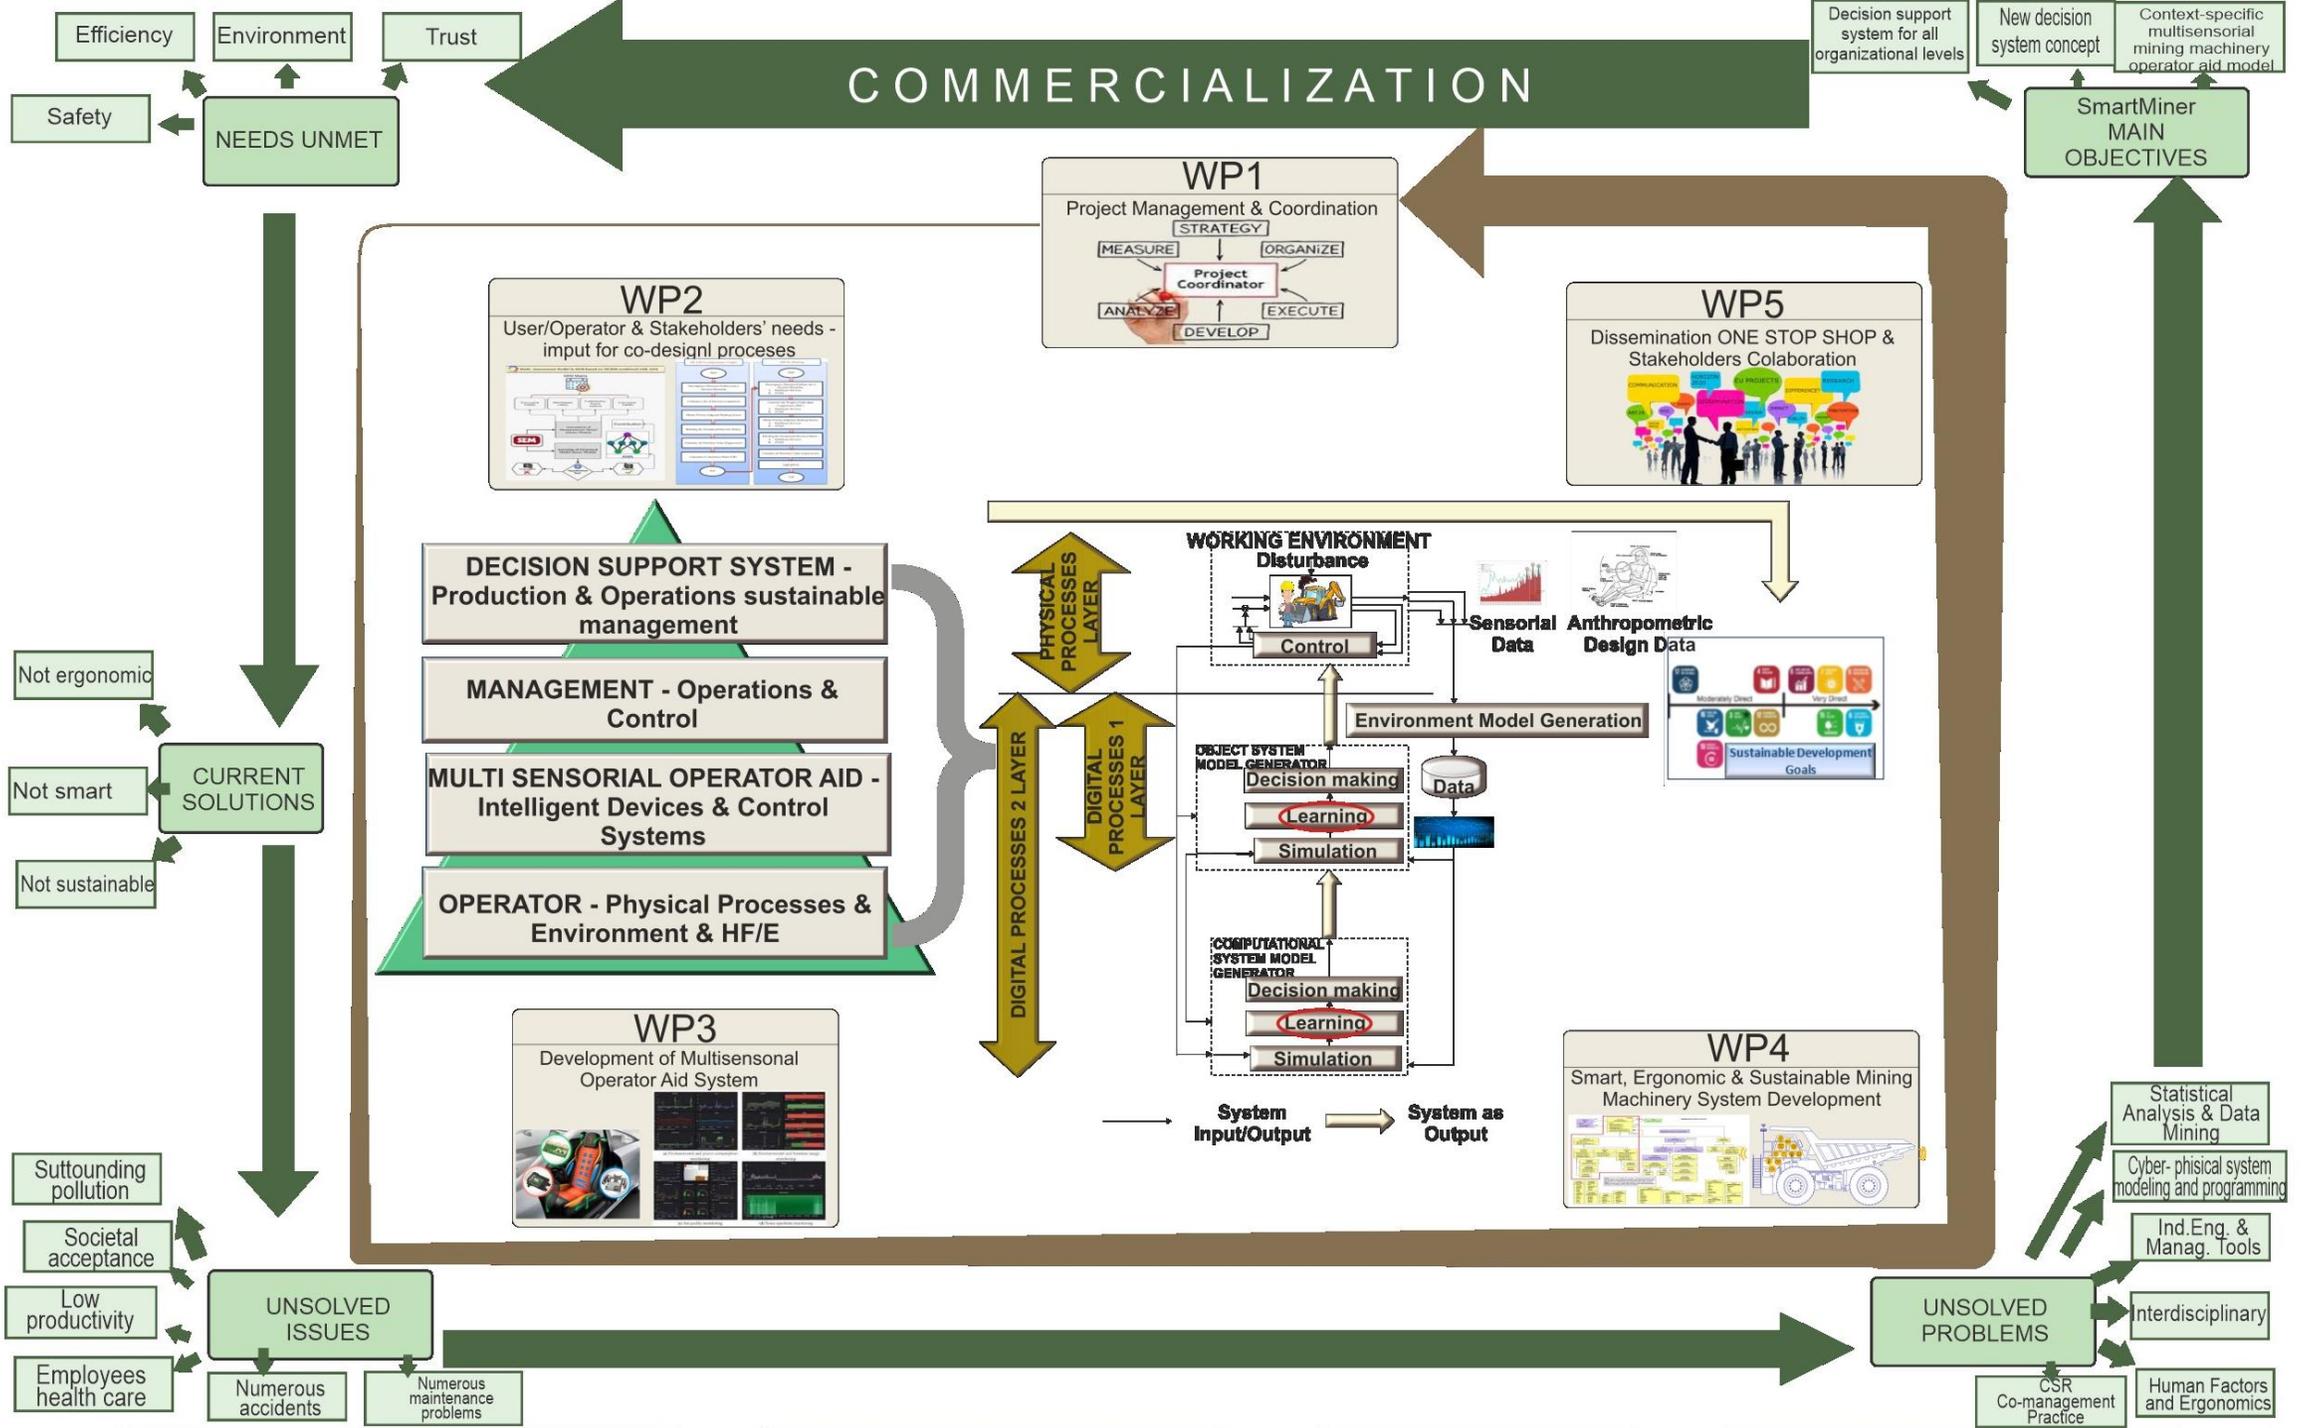

H₁: Level of necessary digitalization and automation of mining machinery workplace depends on contextual factors – primarily on human and organizational factors.

H₂: It is possible to prototype innovative support systems: 1. Operator’s ergonomic adjustment system, serving to solve human factors issues and 2. Smart multi-sensorial operator aid system and software system structural description model as constituent, serving to solve both human and organizational factors issues. Both prototypes are prerequisite parts of commercial Decision Support System.

H₃: If level of HF/E, digitalization and automation and contextual factors are aligned, high value of sustainability index must be achieved.

SmartMiner methodology paradigm

SmartMiner and stakeholders

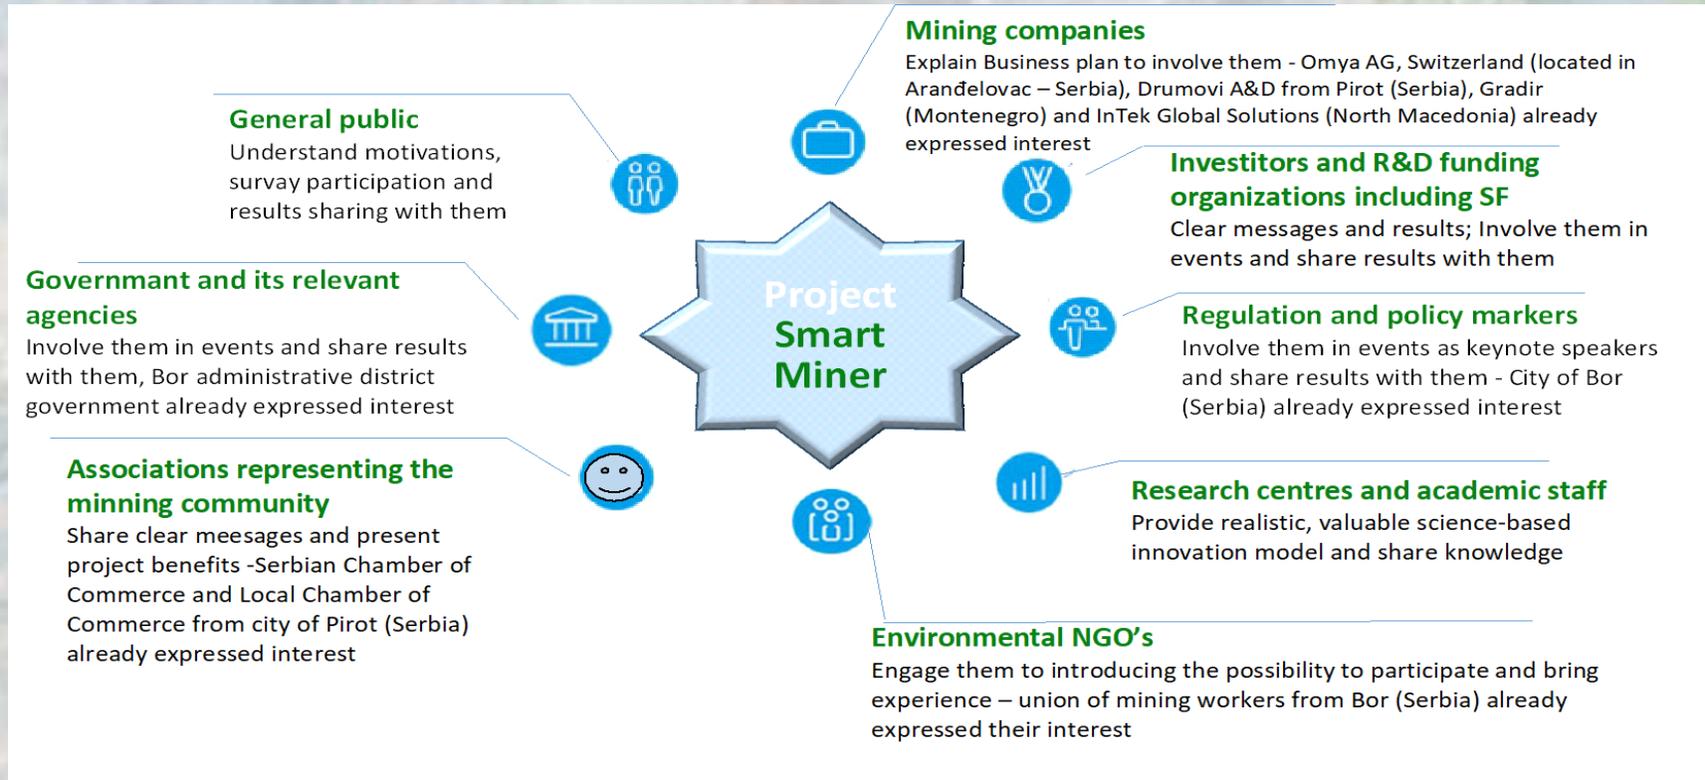

Figure 3. Additional stakeholders “attraction strategies”

Finally, SmartMiner is “one-of-a-kind” :

1. It addresses the major problem of today’s mining industry – its’ **productivity and sustainability by paradigm shift** to combining a human-centric engineering approach with business strategy rooted in data and analytics.
2. It will influence two crucial and correlated factors: **improve safety and reduce pollution**.
3. It **starts and ends with real industry problems** solved by cyclical DBR&DBS approach, which implies continual improvement.
4. It will provide solution in the right way which **integrates individuals, their tasks, smart tools and technologies, physical environment and the organization** as the only way leading to sustainable solution.
5. It addresses **all stakeholders’ and beneficiaries’ groups** – research, academia, industry, unions, public sector...
6. Competent SmartMiner **team** mobilizes 15 researchers and 4 esteemed, top external experts from Germany, USA, the most cited scientist in the region and in the country.
7. It will provide **PCT protected technology development** and **tangible results** through its scientific groundbreaking objectives fulfillment based on HF/E and Artificial Intelligence merged into mining machinery operator micro and macro environment to translate data and signals into a language understandable by human users in manner to transform an operational setting from machine-centered to human-centered.
8. Its results have both national and international significance and **huge potential for future extensions**.

ANKETA

Poštovani,

anketa koja se nalazi pred Vama predstavlja instrument istraživanja stanja bezbednosti i zdravlja Vašeg radnog mesta.

Anketa je anonimna i od Vas se očekuje da kvantitativno vrednujete svaki parametar jednom od ocena 1-6. Ocena treba da predstavlja nivo vašeg slaganja odnosno ne slaganja u vezi stvarnog stanja sa razmatranim parametrom u Vašoj organizaciji. Ocene imaju sledeće značenje:

- 1- potpuno nesaglasan
- 2- nesaglasan
- 3- neutralnog mišljenja
- 4- saglasan
- 5- potpuno saglasan

Takođe, za vrednovanje značaja svakog pojedinačnog parametra u vezi bezbednosti i zdravlja na radu (skr. BZR) koristiti sledeću skalu ocena:

- 1- nema nikavog značaja;
- 2- mali značaj
- 3- srednji značaj
- 4- veliki značaj
- 5- veoma veliki značaj

Takođe, značajno je napomenuti da dva ili više parametra mogu imati istu ocenu.

Unapred Vam hvala na saradnji.

Rizici ankete: Specifičnih rizika nema, osim popunjavanja upitnika ručno ili elektronskim putem na računaru.

Dobrovoljno učešće: S obzirom da Vas ništa ne obavezuje da popunite upitnik, Vaše učešće u anketi je potpuno dobrovoljno. Vaša saglasnost da učestvujete u anketi je data popunjavanjem i slanjem ankete nazad istraživaču na gore navedenu adresu. S obzirom na činjenicu da je istraživanje anonimno, nakon što pošaljete upitnik sa vašim odgovorima, informacije koje ste naveli ne mogu biti povučene iz istraživanja.

Poverljivost i Anonimnost: Sakupljene informacije iz anketa biće predstavljene i objavljene u zbirnom obliku. Shodno tome, informacije koje identifikuju pojedince neće biti korišćene u prezentacijama i objavljenim radovima. Molimo Vas da ne navodite ni Vaše ime ni identifikacione podatke u upitniku. Primljeni upitnici biće čuvani u laboratorijama i/ili na računarima, i dostupni samo za to zaduženim članovima SmartMiner tima. Informacije koje su prikupljene putem anketa biće čuvane 2 godine nakon poslednjeg objavljivanja, i nakon toga uništene.

ANKETA ZA RUKOVOAOCE RUDARSKE MEHANIZACIJE

Poštovani, anketa koja se nalazi pred Vama je anonimna i predstavlja instrument istraživanja stanja ergonomijske prilagodivosti Vašeg radnog mesta. Unapred Vam hvala na saradnji.

Rizici ankete: Specifičnih rizika nema, osim popunjavanja upitnika ručno ili elektronskim putem na računaru.
Dobrovoljno učešće: S obzirom da Vas ništa ne obavezuje da popunite upitnik, Vaše učešće u anketi je potpuno dobrovoljno. Vaša saglasnost da učestvujete u anketi je data popunjavanjem i slanjem ankete nazad istraživaču na gore navedenu adresu. S obzirom na činjenicu da je istraživanje anonimno, nakon što pošaljete upitnik sa vašim odgovorima, informacije koje ste naveli ne mogu biti povučene iz istraživanja.
Powerljivost i Anonimnost: Sakupljene informacije iz anketa biće predstavljene i objavljene u zbirnom obliku. Shodno tome, informacije koje identifikuju pojedince neće biti korišćene u prezentacijama i objavljenim radovima. Molimo Vas da ne navodite ni Vaše ime ni identifikacione podatke u upitniku. Primljeni upitnici biće čuvani u laboratorijama i/ili na računaruima, i dostupni samo za to zaduženim članovima SmartMiner tima. Informacije koje su prikupljene putem anketa biće čuvane 2 godine nakon poslednjeg objavljivanja, a nakon toga uništene.

2.4. Application of hybrid SEM-MCDM procedure

In order to evaluate the considered operator's workplace depending on the mining machineries they use, operator's opinions collected during the survey were used. The average evaluation scores for the seven different types of mining machineries workplaces are shown in Table 7.

Table 7. Summary of the average scores of mining machineries workplaces conditions to each subriterion in model (Likert's scale between 1 and 5)

Type of mining machinery workplace	Human factors-subcriteria			Organizational factors-subcriteria					
	HF_1	HF_2	HF_3	OF_1	OF_2	OF_3	OF_4	OF_5	OF_6
Operator on Excavator	4.597	4.784	4.567	4.448	4.575	4.556	4.326	4.423	4.333
Operator on Rotary excavator	4.500	4.350	4.200	4.000	4.433	4.189	3.800	4.250	4.344
Operator on Dump truck	4.600	4.850	4.500	4.100	4.600	4.400	4.200	4.200	4.320
Operator on Bulldozer	4.600	4.771	4.634	3.708	4.333	3.889	4.146	4.375	3.917
Operator on Loader	4.862	4.769	4.761	4.538	4.513	4.632	4.635	4.885	4.431
Operator on Grader	4.650	4.719	4.719	4.000	3.792	3.847	3.688	4.094	3.675
Operator on Other mining machine	4.757	4.828	4.651	3.964	4.384	4.031	3.834	4.090	3.918
Subcriteria weights	0.055	0.048	0.055	0.141	0.126	0.150	0.144	0.133	0.148

Based on the application of the PROMETHEE II ranking procedure, evaluation and ranking of operator's workplace condition is given in Table 8. The preference level function was chosen as the best solution for the description of the analyzed data. These data are qualitative essentially, and in the analysis their quantitative analogue was used (five-degree scale from one "totally disagree" to five "totally agree"). The value thresholds were chosen $q=0.5$ (Indifference threshold) and $p=1.5$ (Preference threshold), which corresponds to the scale which was used for factor evaluation by operators (Vego et al., 2008). Additionally, Max criteria was selected based on the type of questions belonging to each subcriteria.

Table 8. PROMETHEE II rankings

Type of mining machinery workplace	ϕ^+	ϕ^-	ϕ	Ranking
Operator on Excavator	0.09623	0.00000	0.09623	2
Operator on Rotary excavator	0.02284	0.05595	-0.03310	4
Operator on Dump truck	0.05991	0.01107	0.04884	3
Operator on Bulldozer	0.01049	0.08456	-0.07407	6
Operator on Loader	0.22815	0.00000	0.22815	1
Operator on Grader	0.00454	0.20882	-0.20427	7
Operator on Other mining machine	0.01049	0.07227	-0.06178	5

The workplace with the highest level of safety satisfaction is represented by the Operator on Loader in the PROMETHEE II ranking order, while the workplace with the lowest ranking results is represented by the Operator on Grader.

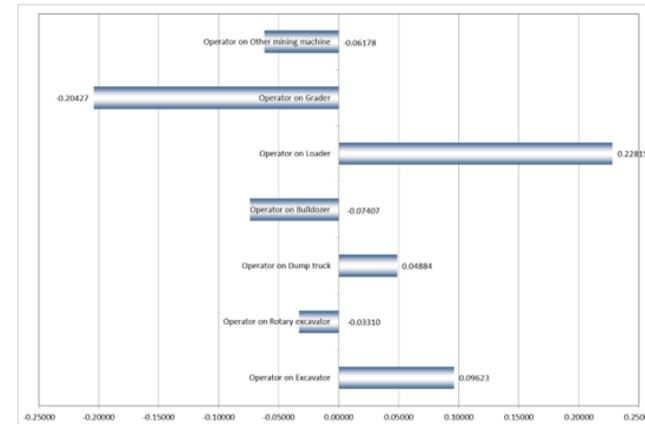

Figure 5. PROMETHEE II net-flow results

The weight evaluation for each criterion affects the outcome as well, because the chosen criteria are not equally important. Data on weight stability intervals for every subriterion are shown in Table 9. Stability interval analysis is used to assess how robust the selected preference relations are. Reevaluating the input subcriteria can be done after the stability intervals have been interpreted. A large stability interval suggests that even when the parameter varies widely, the ranking order remains constant. The weights stability intervals analysis revealed that none of subcriteria were particularly unstable or had a narrow stability interval.

Table 9. Weights stability intervals for the selected subriteria in model

Criteria	Subcriteria	Weight of subcriteria	Interval Minimum	Interval Maximum
Human factors	HF_1	0.055	0	1
	HF_2	0.048	0	1
	HF_3	0.055	0	0.2397
Organizational factors	OF_1	0.141	0.1384	0.6647
	OF_2	0.126	0	1
	OF_3	0.150	0.1474	1
	OF_4	0.144	0	0.1453
	OF_5	0.133	0	1
	OF_6	0.148	0	1

Table 9. TOPSIS rankings

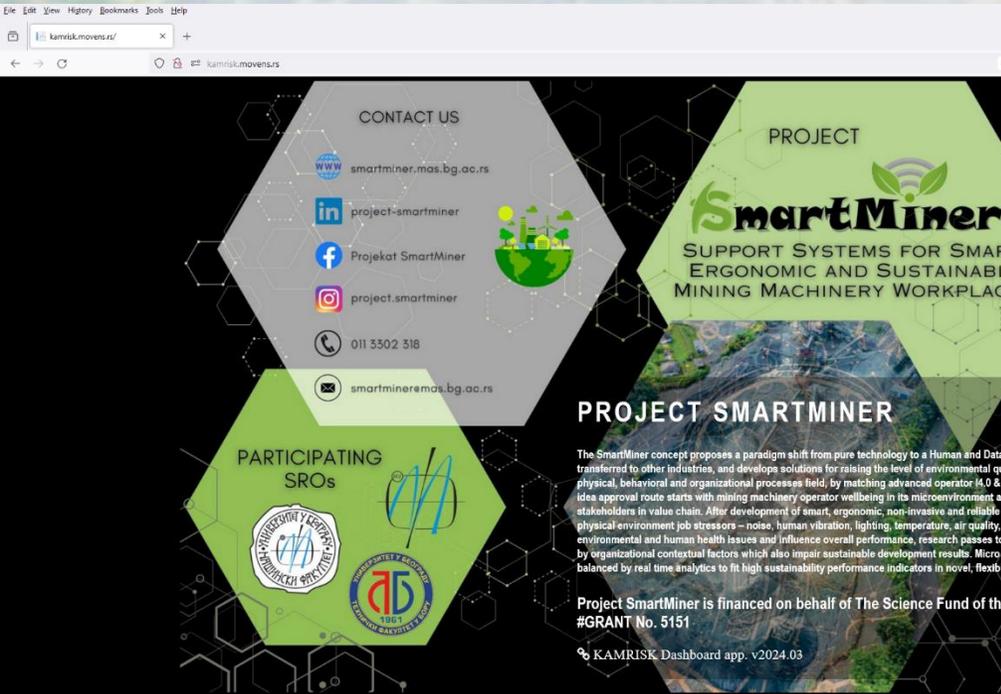

Type of mining machinery workplace	CCi	Ranking
Operator on Excavator	0.74153	2
Operator on Rotary excavator	0.43966	4
Operator on Dump truck	0.58639	3
Operator on Bulldozer	0.34810	5
Operator on Loader	0.96231	1
Operator on Grader	0.16317	7
Operator on Other mining machine	0.31919	6

WP3: Development of context-specific multi-sensorial mining machinery operator aid system

- D3.1. Fully functional multisensory mining machinery operator aid system established or in operating mode (TOOL which can monitor the list of the most important workplaces factors coming out of WP2) – **month 15**
- D3.2. Databases design for collecting the data lines obtained from the measuring sensors and final measurement scale development for assessment of the behavioristic and safety climate indicators of each workplace, on the weekly bases – month 17
- D3.3. Modeling results report- numerical and statistical models, based on MLRA and ANNs, developed for simulation of the procedures and processes on each of evaluated mining machinery workplaces – month 19
- D3.4 Report on verification & validation of multi-sensorial operator aid system input / output models, based on new data lines acquisition - month 21
- D3.5. Operator's ergonomic adjustment system designed and technical solution started verification procedure – month 21

UNIVERSITET U BEOGRADU
MASHINSKI FAKULTET
UNIVERSITET U BEOGRADU
TEHNIČKI FAKULTET

The SmartMiner concept proposes a paradigm shift from pure technology to a Human and Data transferred to other industries, and develops solutions for raising the level of environmental quality, physical, behavioral and organizational processes field, by matching advanced operator (4.0 & idea approval route starts with mining machinery operator wellbeing in its microenvironment and stakeholders in value chain. After development of smart, ergonomic, non-invasive and reliable physical environment job stressors – noise, human vibration, lighting, temperature, air quality, environmental and human health issues and influence overall performance, research passes to by organizational contextual factors which also impair sustainable development results. Micro-balanced by real time analytics to fit high sustainability performance indicators in novel, flexible

Project SmartMiner is financed on behalf of The Science Fund of the #GRANT No. 5151

E-mail: pronid@mas.bg.ac.rs
Др Драгослава Стојиљковић
Датум: 29.03.2024. године

Поштовани,

На основу Вашег захтева број: 56/3 од 08.02.2024. године за потврду оцене техничког решења под називом **Контекстуални адаптивни систем за митигацију ризика рада рударских машина – камриск**, чији су аутори: проф. др Весна Спасојевић Брикић, др Александар Брикић, виши научни сарадник, Иновациони центар Машинског факултета у Београду д.о.о., проф. др Иван Михајловић, проф. др Мирјана Мисита, др Горан Ђурић, научни сарадник, проф. др Угљеша Бугарић, ван. проф. др Желко Стевић, Универзитет у Источном Сарајеву – Саобраћајни факултет Добој. Реализовано 2023. Примењује се од 2023. Тржишна категорија М81 – Ново техничко решење примењено на међународном нивоу.

Обавештавам Вас следеће:

Након прибављених мишљења о наведеном техничком решењу чланови МНО за машинство и индустријски софтвер су их, на седници одржаној 29.03.2024. године разматрали и сачинили предлог да техничко решење под називом **Контекстуални адаптивни систем за митигацију ризика рада рударских машина – камриск**, чији су аутори: проф. др Весна Спасојевић Брикић, др Александар Брикић, виши научни сарадник, Иновациони центар Машинског факултета у Београду д.о.о., проф. др Иван Михајловић, проф. др Мирјана Мисита, др Горан Ђурић, научни сарадник, проф. др Угљеша Бугарић, ван. проф. др Желко Стевић, Универзитет у Источном Сарајеву – Саобраћајни факултет Добој. Реализовано 2023. Примењује се од 2023. **ИСПУЊАВА** све услове предвиђене Правилником о стипендијским истраживачким и научним звањима („Службени гласник РС”, бр 159/20 од 30. децембра 2020.) за доделу категорије М81 – Ново техничко решење примењено на међународном нивоу.

Предлог се доставља НИТРА РС ради процене и прихваћана истог.

Председник МНО
за машинство и индустријски софтвер
Драгослав Стојиљковић
Проф. др Зоран Миљковић

D5.2 – Dissemination Plan Activity Report and Dissemination Activity Report

WP5 Dissemination Plan
Due Date: 1 September 2023
Submission Date: 1 September 2023
Responsible Partner: Faculty of Mechanical Engineering, University of Belgrade (FMEUB)
Version: 1.0
Status: Final
Author(s): Ivana Mihajlović (FMEUB), Vesna Spasojević Brkić (FMEUB), participating P1-P9
Reviewer/QC(s): Isidora Milošević (TF Bor)
Deliverable Type: R: Report
Dissemination Level: PU: Public

- 2 stakeholders engagement workshops
- 1 press release in POLITIKA
- 2 TV releases – RTS and TV Bor
- 8 Advisory&Ethics Board meetings
- 1 special session at conference with 10 papers dedicated to SmartMiner project
- Till now 24 published papers
- 1 technical solution M81

WP5: Dissemination activities and stakeholders' collaboration

D5.3. Scientific open access publications (min 2 in high impact M21/22 journals), 6 high impact conference papers, technical solution and patent application, public events and workshops (cross-section on an annual basis - month 12, 24)

- 2 stakeholders engagement workshops
- 1 press release in POLITIKA
- 2 TV releases – RTS and TV Bor
- 8 Advisory&Ethics Board meetings

WP5:Dissemination activities and stakeholders' collaboration

D5.3. Scientific open access publications (min 2 in high impact M21/22 journals), 6 high impact conference papers, technical solution and patent application, public events and workshops (cross-section on an annual basis - month 12, 24)

- Planned results 2 M21/22, 1 technical solution, 6 M33, 1 patent
- Till now 24 published (1 M22,1 M23,1 M31,1 M51,20 M33) and 1 technical solution M81
- In review 2 high impact papers -1 M21 and 2 M22

WP5: Dissemination activities and stakeholders' collaboration

D5.3. Scientific open access publications (min 2 in high impact M21/22 journals), 6 high impact conference papers, technical solution and patent application, public events and workshops (cross-section on an annual basis - month 12, 24)

- 1 special session at conference with 10 papers dedicated to SmartMiner project

SmartMiner impact

GLOBAL IMPACT

- New and different paradigm
- Environmentally and socially sustainable workplaces due to paradigm shift
- Solutions considering operator & society 5.0 concepts and HF/E
- Change of stakeholders mindset
- Global impact on the society, economy, industry, climate change, environment, biodiversity, healthcare, education and other aspects of social development ➔ higher human development index value all over the world
- Concept transfer to other industries

STRATEGIC (MID-TERM) IMPACT

- Improved industrial safety and economic benefits
- Improved working conditions - efficient and green operation of mining machinery
- New, sustainable solution offered with short time-to-market
- Opens development of specific scientific interdisciplinary fields
- Mining companies become as trusted partners for the development of wealth and prosperity in the society

OPERATION LEVEL IMPACT

- Productivity increase at workplace by 10-30%
- Production increase by 10-20%
- Higher energy efficiency and major pollutants emissions decrease by 100 tons/y per machine
- 15 % lower incidence rates

NATIONAL LEVEL IMPACT

- New, specific scientific, interdisciplinary field is born in Serbia
- Both open access and IP protected results: two publications in high impact M21/22 journals, six on the conferences and technical solution and patent
- increase number of companies, GDP, and employment
- motivating policy makers to harmonize sustainability policies

46th AIM Conference 2024

Thank you for your kind attention
